

Historical Evolution of Neural Networks

From Biological Neurons
to Deep Learning Revolution

1943

McCulloch & Pitts

Mathematical neuron model inspired by biology

1957

Frank Rosenblatt

Developed the first trainable neural network, Perceptron

1982

John Hopfield

Created the Hopfield Network, an early form of RNN

1986

Backpropagation Algorithm

Enabled effective training of multilayer neural networks

1997

LSTM Memory Cells

Addressed vanishing gradient problem in RNNs

2012

2012 – AlexNet's victory in ImageNet

Visual Recognition Challenge sparked modern Deep Learning era

2016

2016 – AlphaGo

Defeated a world champion in Go using Deep Reinforcement Learning
